Chemical and Biochemical Engineering

1	Title of the course (L-T-P-C)	Advanced Transport phenomena (3-0-0-6)
2	Pre-requisite courses(s)	Reaction Engineering
3	Course content	**Introduction:** Review of Transport Equations, Scaling and Ordering analysis, Asymptotic solutions. **Exact solutions:** Pul-satile flow in circular tube, Creeping flows and stream function solutions. **Motion of deformable and slender bodies:** Condi-tions at a deformable interface, Creeping flow past a drop, Marangoni E ects, Flows past Sphere and Oblate Solid bodies, Slender-Body Theory. Asymptotic Approximations for simple flows: Pulsatile flow limiting cases, Motion of fluid through curved tube, Bubble growth in Quiescent fluid. **Thin films and Lubrication:** Eccentric Couette cylinder, Lubrication theory, Slider block, Cylinder and Plane. **Convective Heat and Mass transfer:** Heat transfer from sphere ($Pe \ll 1$) in uniform and shear flow, Low Re expansion for $Pe \ll 1$, $Pe \gg 1$ for low Re. **Mass transfer from a Drop Laminar Boundary Layer Theory:** Review of Boundary Layer Equations and Solution, Boundary layer separation, Approximate method to estimate shear stresses, Spherical bubble, Limiting cases of Thermal boundary layers. **Natural convection:** Boussines Equations, Combined forced and free convection, The Raleigh-Benard Problem.
4	Texts/References	L. G. Leal, Laminar Flow and Convective Transport Processes, Butterworth-Heinemann, 1992.
